

## Post Encryption Information

***Thank you for encrypting your laptop!***

Here's some important information about what you can expect.

- **Your Mac OS X login has been replaced** with a Check Point login (right). Your username is \_\_\_\_\_, and your password is \_\_\_\_\_.
- **You get 5 login attempts.** After 5 failed attempts your computer will be locked, and you will need to call the **DOM Helpdesk at 476-6827** to have it unlocked.
- **Backups are more important than ever!** Encryption makes it nearly impossible to recover data from your hard drive, so a regular backup is the only reliable option for recovering your data. *If DOM IT supports your computer then it is being backed up regularly.*
- **You should not notice any difference in your computer's performance.**
- **Contact the DOM Helpdesk to add additional users** to your system, or to perform major operating system upgrades (e.g., from Mac OS X 10.5 to 10.6).
- **FileVault and Secure Virtual Memory are not necessary.** Since your entire disk is encrypted, using either will just slow your laptop.

***But wait, there's more!***

Encrypting your laptop is only one part of working securely at UCSF. To make sure you're doing everything required to comply with security laws and policies please see <http://domsupport.ucsf.edu/security/>. And let us know if you have any questions.
